

C L A I M S

I Claim:

1. An apparatus for holding paint comprising:
- a. one or more paint storage compartments for storing paint having a front, a back, a first side, a second side and a base;
 - b. a frame configured for holding the paint storage compartments; and
 - c. means for dispensing removeably coupled to the paint storage compartment for dispensing paint from the paint storage compartments.
2. The apparatus for holding paint as claimed in claim 1 wherein the frame is configured for holding a plurality of paint storage compartments.
3. The apparatus for holding paint as claimed in claim 1 wherein the means for dispensing paint includes a spigot assembly.
4. The apparatus for holding paint as claimed in claim 1 wherein the frame includes mounting slots in the back for mounting the frame on a wall.
5. The apparatus for holding paint as claimed in claim 1 further comprising:
- a. a lid for selectively covering the paint storage compartment; and
 - b. means for stirring removeably coupled to the lid for stirring the paint stored in the paint storage compartment when the airtight lid is covering the paint storage compartment.

1 6. The apparatus for holding paint as claimed in claim 5 wherein the means for
2 stirring further comprises:

- 3 a. a circular base having a central axis, wherein the circular base is configured
4 for rotating about the central axis;
- 5 b. a rod coupled to the circular base at the central axis such that the rod spins
6 when the circular base is rotated about the central axis; and
- 7 c. a stirring fan apparatus removeably coupled to the rod and having a plurality
8 of fins which extend outwardly from the stirring fan apparatus and rotate about
9 the central axis when the circular base is rotated for stirring the paint
10 contained within the paint storage compartment.

1 7. An apparatus for storing paint comprising:

- 2 a. a paint storage compartment for storing paint having a front, a back, a first
3 side, a second side and a base;
- 4 b. a frame configured for holding the paint storage compartment;
- 5 c. a lid for covering the paint storage compartment; and
- 6 d. a stirring assembly removeably coupled to the lid for stirring the paint stored
7 in the paint storage compartment when the lid is covering the paint storage
8 compartment.

1 8. The apparatus as claimed in claim 7 wherein the frame is configured for
2 holding a plurality of paint storage compartments.

1 9. The apparatus as claimed in claim 7 wherein the frame includes mounting slots
2 in the back for mounting the frame on a wall.

1 10. The apparatus as claimed in claim 7 wherein the stirring assembly comprises:
2 a. a circular base configured for rotating about a central axis;
3 b. a rod coupled to the circular base at the central axis such that the rod spins
4 when the circular base is rotated about the central axis;
5 c. a stirring fan apparatus removeably coupled to the rod for stirring paint
6 contained within the paint storage compartment, wherein the stirring fan
7 apparatus includes a plurality of fins which extend outwardly from the stirring
8 fan apparatus and rotate about the central axis when the circular base is
9 rotated.

1 11. An apparatus for storing paint comprising:
2 a. a paint storage compartment for storing paint having a front, a back, a first
3 side, a second side and a base;
4 b. a frame configured for holding the paint storage compartment;
5 c. a dispensing mechanism removeably coupled to the paint storage compartment
6 for dispensing paint from the paint storage compartment;
7 d. a lid for covering the paint storage compartment; and
8 e. a stirring assembly removeably coupled to the lid for stirring the paint stored
9 in the paint storage compartment.

1 12. The apparatus as claimed in claim 11 wherein the frame is further configured
2 for holding a plurality of paint storage compartments.

1 13. The apparatus as claimed in claim 11 wherein the dispensing mechanism
2 includes a spigot assembly.

1 14. The apparatus as claimed in claim 11 wherein the frame includes mounting
2 slots for mounting the frame on a wall.

- 1 15. The apparatus as claimed in claim 11 wherein the stirring assembly comprises:
2 a. a circular base configured for rotating about a central axis;
3 b. a rod coupled to the circular base at the central axis such that the rod spins
4 when the circular base is rotated about the central axis; and
5 c. a stirring fan apparatus removeably coupled to the rod and having a plurality
6 of fins which extend outwardly from the stirring fan apparatus and rotate about
7 the central axis when the circular base is rotated.

- 1 16. A reusable paint container comprising:
2 a. a paint compartment for storing paint;
3 b. a body configured for holding the paint compartment having a front, a back, a
4 first side and a second side;
5 c. a lid removeably coupled to the paint compartment having an outer side, an
6 inner opposite side and a small aperture located through the airtight lid from
7 the outer side to the inner opposite side;
8 d. a stirring mechanism removeably coupled to the outer side of the lid having an
9 integrally formed rod located at a central axis of the stirring mechanism,
10 wherein the rod is positioned through the small aperture in the lid to extend
11 into the paint compartment when the lid is positioned over the paint
12 compartment; and
13 e. a fan apparatus removeably coupled to the rod of the stirring mechanism on
14 the inner opposite side of the lid.

- 1 17. The reusable paint container as claimed in claim 16 wherein the body includes
2 a plurality of mounting slots located on the back for mounting the main body to a wall.

1 18. The reusable paint container as claimed in claim 16 wherein the stirring
2 mechanism includes a handle for rotating the stirring mechanism about the central axis,
3 thereby causing the fan apparatus to spin.

1 19. The reusable paint container as claimed in claim 16 wherein an interior of the
2 paint compartment has a sloped area and a reservoir area.

1 20. The reusable paint container as claimed in claim 19 wherein the reservoir area
2 includes a centrally located circular depression having a small hole located in the center of
3 the circular depression, wherein the small hole is configured for coupling a spigot assembly
4 to the paint compartment.

1 21. The reusable paint container as claimed in claim 16 wherein the first side of
2 the body includes rounded ribs and the second side of the body includes rounded channels
3 such that multiple reusable paint containers can be connected together by coupling the
4 rounded ribs to the rounded channels.

4152 22. A reusable paint container comprising:

- a. a body configured for holding paint within one or more integral paint compartments each having a front, a back, a first side and a second side;
- b. a lid removeably coupled to the paint compartments having an outer side, an inner opposite side and a small aperture located through the airtight lid from the outer side to the inner opposite side;
- c. a stirring mechanism removeably coupled to the outer side of the lid having an integrally formed rod located at a central axis of the stirring mechanism, wherein the rod is positioned through the small aperture in the lid to extend into a corresponding paint compartment when the lid is positioned over the corresponding paint compartment; and

12 d. a fan apparatus removeably coupled to the rod of the stirring mechanism on
13 the inner opposite ~~side of the lid.~~

1 23. The reusable paint container as claimed in claim 22 wherein the paint
2 compartments are single walled.

1 24. The reusable paint container as claimed in claim 22 wherein the body includes
2 a plurality of mounting slots located on the back for mounting the main body to a wall.

1 25. The reusable paint container as claimed in claim 22 wherein the stirring
2 mechanism includes a handle for rotating the stirring mechanism about the central axis,
3 thereby causing the fan apparatus to spin.

1 26. The reusable paint container as claimed in claim 22 wherein an interior of the
2 paint compartments has a sloped area and a reservoir area.

1 27. The reusable paint container as claimed in claim 26 wherein the reservoir area
2 includes a centrally located circular depression having a small hole located in the center of
3 the circular depression, wherein the small hole is configured for coupling a spigot assembly
4 to the paint compartment.

1 28. The reusable paint container as claimed in claim 22 wherein the first side of
2 the body includes rounded ribs and the second side of the body includes rounded channels
3 such that multiple reusable paint containers can be connected together by coupling the
4 rounded ribs to the rounded channels.
